Smart Heating Voice Control

Amazon Alexa & Google Home

Setup guide for compatible RADI8 Wi-Fi heaters connected through the Smart Life app.

01 **Amazon Alexa**

Link Smart Life and discover your heater.

02 **Google Home**

Link Smart Life and add your heater to a room.

ONE GUIDE. TWO SEPARATE SETUP SECTIONS.

Before you start: page 2 | Troubleshooting: page 7

Infrared Heating Supplies

Version 1.1 | November 2026

BEFORE YOU START

Connect in Smart Life first

Complete these checks before linking either voice service.

1

Check that this guide applies

Use this guide for compatible RADI8 Wi-Fi heaters controlled through **Smart Life**. It does not cover heaters without Wi-Fi or thermostats that use the separate Netmostat app.

2

Get the apps and accounts ready

Install the latest **Smart Life** app from the Apple App Store or Google Play. Sign in or create an account. For Alexa, you also need the Amazon Alexa app and an Amazon account. For Google Home, you need the Google Home app and a Google account.

3

Add and test your heater

Follow your heater manual to pair it with Smart Life. Use the Wi-Fi network specified in that manual, normally **2.4GHz**. Check that the heater is online and responds to heating controls in Smart Life before continuing.

4

Give it a clear name

Use a short, distinct name such as **Living Room Heater**. Avoid giving several devices the same name. Use this name when testing voice commands.

5

Set up your speaker or display

If your Amazon Echo or Google Home/Nest speaker or display is new, follow the setup prompts in its app first. Sign in with the account you will use to link Smart Life.

Connection and controls

A working internet connection is required for these linked voice services. Voice features depend on the heater and the controls exposed by the service. For LED models, this guide covers **heating control**; it does not promise voice control of the lighting.

Menu names and button positions may vary with app version, phone and region. Follow the equivalent account-linking option if your screen differs.

01 / AMAZON ALEXA

Link your heater to Alexa

Alexa is the voice service used by compatible Amazon Echo devices.

1

Open the Alexa app

Sign in to your Amazon account. Open **More**, then **Skills & Games**.

2

Find the Smart Life skill

Search for **Smart Life** (also shown as **SmartLife**). Select the skill from **Tuya Inc.**, then choose **Enable to Use**.

3

Link the correct account

Follow the sign-in or authorisation prompts. Use the **same Smart Life account and country/region** used to add your heater. Approve account linking, then return to Alexa when prompted.

4

Discover your heater

Follow the device-discovery prompt, or say **"Alexa, discover devices."** Once discovery finishes, check the **Devices** list and assign the heater to a room or group if required.

> **Try a heating command**
>
> Using the name you gave the heater, try:
> **"Alexa, turn on Living Room Heater."**
> **"Alexa, turn off Living Room Heater."**

Temperature control: additional commands depend on the controls available for your model in Alexa. Check the device tile before relying on voice temperature adjustment.

If you rename the heater in Smart Life, refresh device discovery in Alexa and check the name shown before trying another command.

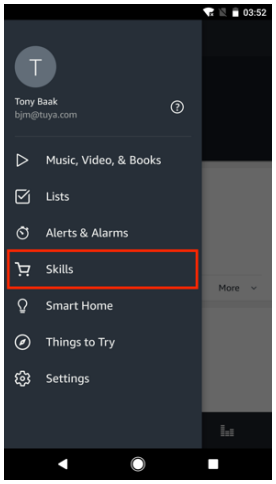

01 / AMAZON ALEXA

Alexa: app screen reference

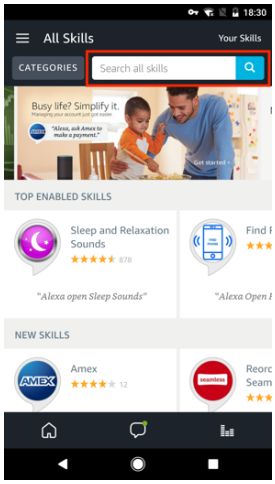

Supplier screenshots illustrating the account-linking process.

> **App layouts may vary**
>
> These are the screenshots supplied with the original guides. They show an earlier app version; use the instructions on the preceding page if menu names or positions differ. Any lights shown are sample devices, not heater lighting controls.

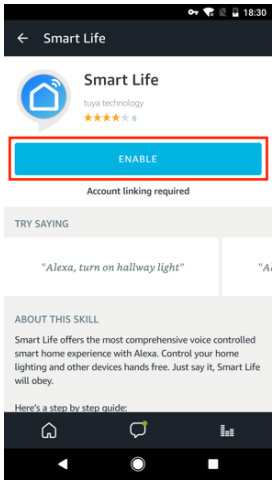

01 Open the Skills menu

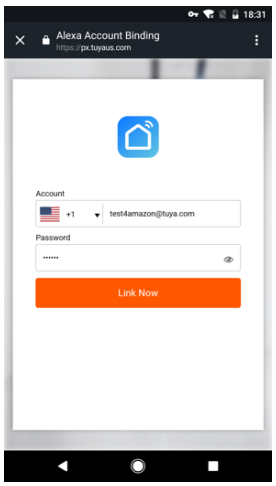

02 Search for Smart Life

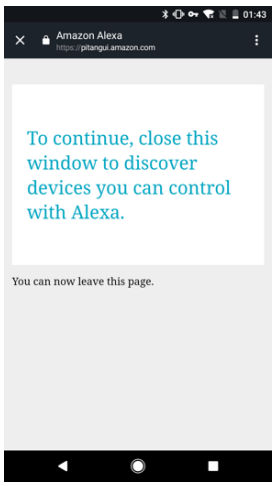

03 Enable the Smart Life skill

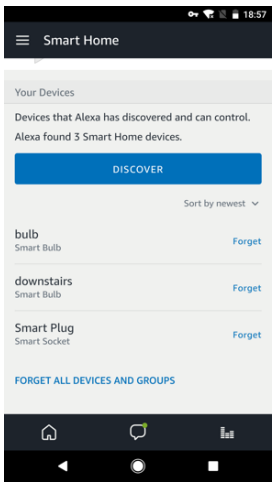

04 Sign in and link account

05 Return to Alexa

06 Discover your devices

02 / GOOGLE HOME

Link your heater to Google Home

Keep the heater online in Smart Life while linking your account.

1 **Open the Google Home app**

Sign in to your Google account and select the home you want to use.

2 **Find the account-linking option**

Tap **Add (+)**, then **Device** and **Add a different way**. Search for **Smart Life** and select the app.

On some layouts, use **Add (+) > Link app or service > Works with Google**, then search for Smart Life.

3 **Link Smart Life**

Choose **Link app** or the equivalent linking option. Sign in to the same Smart Life account used for your heater, select the matching country/region if asked and approve the connection.

4 **Assign the heater to a room**

Follow the prompts to add the detected heater to your home and room. If Smart Life is already linked, use **Check for devices** where offered, or say **"Hey Google, sync my devices."**

> **Try a heating command**
>
> Using the heater name shown in Google Home, try:
> **"Hey Google, turn on Living Room Heater."**
> **"Hey Google, turn off Living Room Heater."**

Additional controls, including temperature adjustment, depend on the model and the options exposed in Google Home. Check the heater tile for available controls.

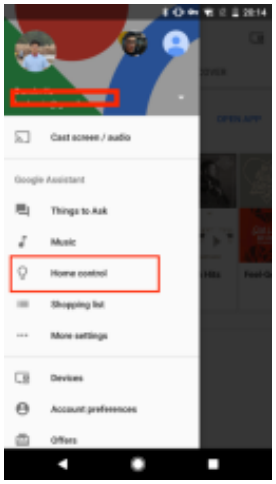

02 / GOOGLE HOME

Google Home: app screens

Supplier screenshots illustrating the account-linking process.

> **App layouts may vary**
>
> These are the screenshots supplied with the original guides. They show an earlier app version; use the instructions on the preceding page if menu names or positions differ. Any lights shown are sample devices, not heater lighting controls.

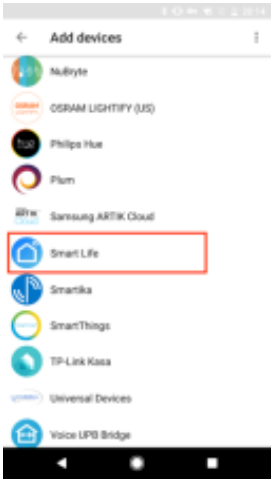

01 Open Home control

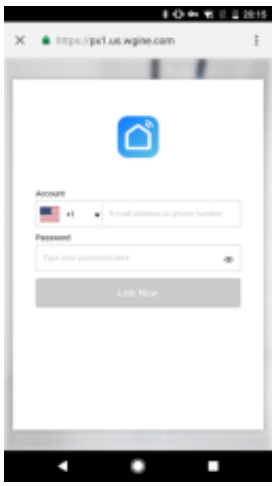

02 Add a device or service

03 Select Smart Life

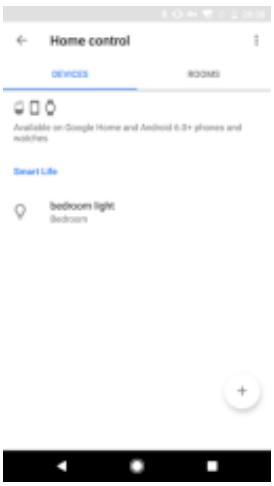

04 Sign in and link account

05 Assign a room

06 Check the device list

HELP & REFERENCE

If the heater does not respond

Start with Smart Life, then check the linked voice service.

Heater missing or offline

Check power, internet access and the heater's status in Smart Life. If it cannot be controlled there, resolve its Wi-Fi connection using the heater manual first.

Account will not link

Confirm that you are using the Smart Life account that owns the heater, with the matching country/region. Update both apps and try the linking process again.

Heater works in the app, but not by voice

Use the exact device name shown in Alexa or Google Home. Check for duplicate names and refresh discovery in Alexa or sync devices in Google Home.

A temperature or lighting command is rejected

Only controls exposed by your heater to the linked service are available. Use Smart Life or the heater's supplied controls for functions that are not available by voice.

Still unable to connect?

Use the official app help links below or contact Infrared Heating Supplies with your heater model, app name and a screenshot of the error.
